

Designing a Waveguide Diplexer for the 5G Mobile Network

Introduction

A diplexer is a device that combines or splits signals into two different frequency bands, widely used in mobile communication systems. This example simulates splitting properties using a simplified 2D geometry. The computed S-parameters and electric fields at the lower and upper bands will show the diplexer characteristics in the Ka-band.

Figure 1: 2D layout of the diplexer composed of 3-port waveguide structures.

Model Definition

This example is based on a WR-28 waveguide for Ka-band applications. The width of the 2D waveguide is 0.28 inches, which is the length of the longer side of a WR-28 waveguide aperture. The model considers only the dominant TE₁ mode. The cutoff frequency of the dominant mode is 21.08 GHz. There are two cavities working as bandpass structures between the input and each output port that are connected with irises. The waveguides, cavities and irises are modeled as copper with finite conductivity using an Impedance Boundary condition to evaluate loss at a high frequency range and the inside of the waveguide is filled with air. On each end of the waveguide, a port boundary condition is applied with the predefined rectangular TE₁ mode. Only one port is excited to observe the S-parameters of the example.

Results and Discussion

S-parameters are plotted in Figure 2. The lower passband is around 28 GHz and the upper passband is around 30.4 GHz. The insertion loss in each passband is about 0.1 dB, mainly caused by the finite conductivity of the copper walls. In Figure 3 and Figure 4, the E-field norm is visualized for each passband, showing that the input power at each passband is not split into two output ports, but separately distributed without being coupled to the other port.

Figure 2: The S-parameter plot shows the lower and upper passband of the diplexer.

The isolation properties between two output ports are not reviewed in this example but users are encouraged to try by exciting port 2 or 3 only.

Figure 3: The E-field norm plot for a frequency of 28 GHz. The input power flows into port 2 only.

freq(45)=30.4 GHz Surface: Electric field norm (V/m) Contour: Electric field norm (V/m)

Figure 4: The E-field norm plot for a frequency of 30.4 GHz. The input power flows into port 3 only.

Modeling Instructions

From the File menu, choose New.

NEW

In the New window, click Solution Model Wizard.

MODEL WIZARD

- I In the Model Wizard window, click **Q** 2D.
- 2 In the Select Physics tree, select Radio Frequency>Electromagnetic Waves, Frequency Domain (emw).
- 3 Click Add.
- 4 Click \bigcirc Study.
- 5 In the Select Study tree, select General Studies>Frequency Domain.
- 6 Click **M** Done.

STUDY I

Step 1: Frequency Domain

- I In the Model Builder window, under Study I click Step I: Frequency Domain.
- 2 In the Settings window for Frequency Domain, locate the Study Settings section.
- 3 In the Frequencies text field, type range(26[GHz],0.1[GHz],33[GHz]).

GEOMETRY I

- I In the Model Builder window, under Component I (compl) click Geometry I.
- 2 In the Settings window for Geometry, locate the Units section.
- 3 From the Length unit list, choose mm.

Import I (imp1)

- I In the **Home** toolbar, click **III** Import.
- 2 In the Settings window for Import, locate the Import section.
- 3 Click 📂 Browse.

- **4** Browse to the model's Application Libraries folder and double-click the file waveguide_diplexer.mphbin.
- 5 Click া Import.

DEFINITIONS

Waveguide walls

- I In the Definitions toolbar, click 🗞 Explicit.
- 2 In the Settings window for Explicit, type Waveguide walls in the Label text field.
- 3 Locate the Input Entities section. From the Geometric entity level list, choose Boundary.
- 4 Click **Paste Selection**.
- 5 In the Paste Selection dialog box, type 2-54, 57-78 in the Selection text field.
- 6 Click OK.

ADD MATERIAL

- I In the Home toolbar, click 🙀 Add Material to open the Add Material window.
- 2 Go to the Add Material window.
- 3 In the tree, select Built-in>Air.
- 4 Click Add to Component in the window toolbar.
- 5 In the tree, select **Built-in>Copper**.

- 6 Click Add to Component in the window toolbar.
- 7 In the Home toolbar, click 🙀 Add Material to close the Add Material window.

MATERIALS

Copper (mat2)

- I In the Settings window for Material, locate the Geometric Entity Selection section.
- 2 From the Geometric entity level list, choose Boundary.
- 3 From the Selection list, choose Waveguide walls.

ELECTROMAGNETIC WAVES, FREQUENCY DOMAIN (EMW)

Port I

- I In the Model Builder window, under Component I (compl) right-click Electromagnetic Waves, Frequency Domain (emw) and choose Port.
- **2** Select Boundary 1 only.
- 3 In the Settings window for Port, locate the Port Properties section.
- 4 From the Type of port list, choose Rectangular.

For the first port, wave excitation is **on** by default.

Port 2

- I In the Physics toolbar, click Boundaries and choose Port.
- **2** Select Boundary 56 only.
- 3 In the Settings window for Port, locate the Port Properties section.
- 4 From the Type of port list, choose Rectangular.
- **5** Select Boundary 55 only.

Port 3

- I Right-click Port 2 and choose Duplicate.
- 2 In the Settings window for Port, locate the Boundary Selection section.
- 3 Click Clear Selection.
- 4 Select Boundary 56 only.

With TE waves, only the z-component of the electric field needs to be solved for

- 5 In the Model Builder window, click Electromagnetic Waves, Frequency Domain (emw).
- 6 In the Settings window for Electromagnetic Waves, Frequency Domain, locate the Components section.

7 From the Electric field components solved for list, choose Out-of-plane vector.

Impedance Boundary Condition 1

- I In the Physics toolbar, click Boundaries and choose Impedance Boundary Condition.
- **2** In the **Settings** window for **Impedance Boundary Condition**, locate the **Boundary Selection** section.
- 3 From the Selection list, choose Waveguide walls.

MESH I

- I In the Model Builder window, under Component I (compl) click Mesh I.
- 2 In the Settings window for Mesh, locate the Physics-Controlled Mesh section.
- 3 From the Element size list, choose Fine.

4 In the **Home** toolbar, click **III Build Mesh**.

It is not necessary to review the mesh, but it is a good practice to take a look at it before running the simulation.

STUDY I

Step 1: Frequency Domain Click **Compute**.

RESULTS

Contour I

- I Right-click Electric Field (emw) and choose Contour.
- 2 In the Settings window for Contour, locate the Coloring and Style section.
- **3** From the **Contour type** list, choose **Filled**.

Height Expression 1

- I Right-click Contour I and choose Height Expression.
- 2 In the Settings window for Height Expression, locate the Axis section.
- **3** Select the **Scale factor** check box.
- **4** In the associated text field, type 0.005.
- 5 In the Electric Field (emw) toolbar, click **O** Plot.
- 6 Click the **Zoom Extents** button in the **Graphics** toolbar.

freq(71)=33 GHz Surface: Electric field norm (V/m) Contour: Electric field norm (V/m)

The E-field norm is visualized at the last frequency, which is out of the passband. The plot shows that the input wave does not propagate to any of the output ports.

S-parameter (emw)

- I In the Model Builder window, under Results click S-parameter (emw).
- 2 In the Settings window for ID Plot Group, locate the Legend section.

3 From the **Position** list, choose **Lower right**.

Compare the reproduced plot to Figure 2. The lower and upper passband frequencies are around 28 GHz, and 30.4 GHz, respectively.

Electric Field (emw)

- I In the Model Builder window, click Electric Field (emw).
- 2 In the Settings window for 2D Plot Group, locate the Data section.
- 3 From the Parameter value (freq (GHz)) list, choose 28.
- 4 In the Electric Field (emw) toolbar, click 💿 Plot.

The E-field norm plot at the lower passband is shown in Figure 3.

- 5 From the Parameter value (freq (GHz)) list, choose 30.4.
- 6 In the Electric Field (emw) toolbar, click 💿 Plot.

Finish the result analysis by reproducing Figure 4, which is the E-field norm plot at the upper passband.
